### AFCEC Tyndall Asset Visibility Energy Program

The AFCEC Asset Visibility Team (AVT) is actively managing Air Force-wide implementation of the Sustainment Management Systems (SMS), a suite of web-based software applications developed by the U.S. Army Corps of Engineers (USACE) to help leadership, facility engineers, technicians and Activity Management Plan, or AMP, managers decide when, where and how to best maintain CE's built infrastructure while conserving energy. As the Air Force lead for SMS, the AVT is working with USACE to incorporate an energy audit module in BUILDER software. This BUILDER energy audit module may radically change and improve how DoD performs energy audits across all the services.
